

Environmentally friendly way to control slugs and snails launched in the UK

Slugs and snails can cause an awful lot of damage in the garden but with Neudorff's Sluggo Slug & Snail Killer all slugs and snails in the garden can be effectively controlled without harming the environment. It contains the active ingredient Iron-III phosphate that when ingested causes slugs and snails to stop eating and creep back down into the soil to die below the ground – leaving no messy slime trails or dead remains. Iron-III phosphate occurs naturally in garden soil.

Effective against slugs and snails - with a natural active ingredient: Neudorff's Sluggo Slug & Snail Killer*.

When used as directed, Sluggo does not pose any risk to birds, earthworms, hedgehogs, bees, pets and other non target species.

Edible plants can be harvested immediately after using Sluggo Slug & Snail Killer and children and pets do not need to be excluded from areas being treated.

The pellets are rain resistant swell when damp, which makes them even more attractive to slugs and snails. They are biodegradable. Unconsumed pellets convert into iron and phosphate in the soil, delivering added nutrients to the plants.

A 450 g carton and a 800 g bottle of Neudorff Sluggo Slug & Snail Killer have rrp's of £3.99 and £6.99 and are available from UK garden centres.
